Theoretical Foundations of Personal Financial Planning

Understanding the theories behind financial planning enables practitioners and individuals to make informed decisions. The theoretical frameworks provide a basis for the strategies and tools employed in real-world scenarios.

Modern Portfolio Theory (MPT)

Developed by Harry Markowitz, MPT suggests that investors can construct portfolios to optimize returns based on their risk tolerance through diversification. This theory emphasizes balancing risk and return, which is fundamental in investment planning.

Behavioral Finance

Behavioral finance examines how psychological biases and emotions influence financial decisions. Recognizing biases such as overconfidence, loss aversion, and herd behavior helps planners guide clients towards more rational choices.

Life-Cycle Hypothesis

This theory proposes that individuals plan their consumption and savings behavior over their lifetime, aiming to smooth consumption as income changes. It underscores the importance of adapting financial plans at different life stages.

Time Value of Money (TVM)

A fundamental principle stating that money available today is worth more than the same amount in the future, due to its potential earning capacity. TVM is crucial in investment and retirement planning.
