```
```java

public class HelloWorld {

 public static void main(String[] args) {

 System.out.println("Hello, World!");

 }

}

```
```

Breakdown of the code:

- Class Declaration (`public class HelloWorld`): Defines the class, which is the fundamental building block.
- Main Method (`public static void main(String[] args)`): Entry point of any Java application.
- Statement (`System.out.println`): Outputs text to the console.

The instructor explains the significance of each component and how they interact during program execution. This exercise solidifies students' understanding of syntax, structure, and execution flow.

Fundamental Programming Concepts Introduced

Variables and Data Types

The lecture introduces primitive data types (`int`, `float`, `char`, `boolean`) and the concept of variables as containers for data. Examples are provided to demonstrate declaration, initialization, and usage.
