## Sample Electricity and Magnetism Test Answers with Explanations

### Question 1: What is Coulomb's Law?

**Answer:** Coulomb's Law states that the magnitude of the electrostatic force ( $F$ ) between two point charges is directly proportional to the product of the magnitudes of the charges ( $q_1$  and  $q_2$ ) and inversely proportional to the square of the distance ( $r$ ) between them:

$$F = k |q_1 q_2| / r^2$$

where  $k$  is Coulomb's constant ( $\sim 8.99 \times 10^9 \text{ N}\cdot\text{m}^2/\text{C}^2$ ).

This law explains how charges attract or repel each other depending on their signs.

### Question 2: How does the right-hand rule determine the direction of magnetic

## force?

**Answer:** The right-hand rule is used to find the direction of magnetic force on a moving charge or current. To apply:

- Point your fingers in the direction of the magnetic field (B).
- Point your thumb in the direction of the positive charge or current (v).
- The palm's direction indicates the force (F) exerted on the positive charge.

This rule helps visualize the interaction between moving charges and magnetic fields.

### Question 3: Calculate the magnetic force on a 2 C charge moving at 3 m/s perpendicular to a magnetic field of 0.5 T.

**Solution:** Using the magnetic force formula:

$$F = qvB \sin\theta$$

Since the velocity is perpendicular to the magnetic field,  $\sin\theta = 1$ .

$$F = 2 \text{ C} \times 3 \text{ m/s} \times 0.5 \text{ T} \times 1 = 3 \text{ N}$$

The magnetic force acting on the charge is 3 Newtons.
