Question 1:

Describe the flow of energy through an ecosystem.

Answer:

The energy flows through an ecosystem starting with the Sun, which provides energy for producers (plants and algae) through photosynthesis. Consumers (herbivores, carnivores, omnivores) then consume these producers or other consumers, transferring energy up the food chain. Decomposers break down dead organisms, returning nutrients to the soil. The energy diminishes at each level due to heat loss, following the energy pyramid model.

Label the parts of the water cycle diagram.

Answer:

The answer key provides the correct labels: evaporation, condensation, precipitation, runoff, infiltration, and transpiration, along with a diagram illustrating these processes.

Question 3:

Explain how human activities influence the nitrogen cycle.

Answer:

Humans impact the nitrogen cycle primarily through fertilizer use, which increases nitrogen levels in soil and water bodies. This can lead to nutrient runoff, causing eutrophication. Combustion of fossil fuels releases nitrogen oxides into the atmosphere, contributing to acid rain and air pollution. The answer key elaborates on these processes and their ecological consequences.
