Understanding how these systems function individually and collectively is essential for grasping human physiology.

The Skeletal System: Framework and Support

Structure and Function

The skeletal system provides support, protection, and movement leverage. It also serves as a mineral reservoir and houses bone marrow, where blood cells are produced.

Key Components

- Bones: Composed of compact and spongy tissue
- Cartilage: Provides flexibility and cushioning

- Joints: Facilitate movement

Common Questions & Answers

- Q: What are the main functions of bones?

A: Support, protection of internal organs, movement facilitation, mineral storage (calcium and phosphorus), and blood cell production.

- Q: How are bones classified?

A: By shape: long bones (femur), short bones (carpals), flat bones (sternum), and irregular bones (vertebrae).

The Muscular System: Movement and Stability

Types of Muscles

- Skeletal muscles: Voluntary movement
- Smooth muscles: Involuntary, found in organs
- Cardiac muscle: Heart muscle, involuntary but striated

Key Functions

- Movement of body parts
- Maintenance of posture
- Heat production during contraction

Typical Questions & Answers

- Q: How do muscles work in pairs?

A: Muscles often work in antagonistic pairs, where one contracts (agonist) while the other relaxes (antagonist), enabling controlled movement.

- Q: What is muscle fatigue?

A: The decline in muscle strength due to sustained activity, often caused by depletion of energy sources and buildup of lactic acid.

The Nervous System: Control and Communication

Central and Peripheral Nervous System

- Central Nervous System (CNS): Brain and spinal cord
- Peripheral Nervous System (PNS): Nerves outside CNS

Functions

- Sensory input
- Integration of data
- Motor output

Key Questions & Answers

- Q: What are neurons?

A: Neurons are nerve cells responsible for transmitting electrical signals throughout the body.

- Q: How does the nervous system maintain homeostasis?

A: By detecting changes and initiating appropriate responses, such as adjusting heart rate or blood pressure.

The Circulatory System: Transport Network

Components
