How the Pump Works: Step-by-Step

- Fuel Intake: Fuel enters the pump through the inlet port, passing through filters to remove impurities.
- Fuel Compression: The drive gear, synchronized with the engine's timing, rotates the camshaft, which in turn moves the plungers. The plungers pressurize the fuel within the barrels.
- Timing Control: The camshaft's rotation and the governor mechanism synchronize to determine when fuel is injected into each cylinder.
- Fuel Delivery: When a plunger reaches the end of its stroke, it opens the delivery valve, allowing high-pressure fuel to flow out through the high-pressure outlet.
- Injection into Cylinder: The pressurized fuel is then injected into the combustion chamber via the fuel injectors.
- Regulation: The governor adjusts the position of the control lever or rack, controlling the amount of fuel delivered based on engine demand.

This process repeats rapidly, ensuring each cylinder receives the appropriate amount of fuel at the correct timing, vital for efficient combustion and engine performance.
