Key Topics Covered in Pearson Geometry Chapter 10

Circumference, Radius, and Diameter

Understanding the relationships among these basic circle components is fundamental:

- The circumference formula: $C = 2\pi r$
- Diameter is twice the radius: $d = 2r$
- Arc length calculations involve proportional reasoning based on the central angle

Angles in Circles

Angles formed within or around circles are central to many problems:

- Inscribed Angles: The measure of an inscribed angle is half the measure of its intercepted arc.
- Central Angles: The angle at the center of the circle, equal in measure to its intercepted arc.
- Angles Formed by Chords, Tangents, and Secants: Relationships among these angles are governed by specific theorems.

Arcs and Their Measures

- Minor and Major Arcs: Minor arcs measure less than 180° , major arcs more than 180° .
- Semicircles: Arcs that measure exactly 180° , often related to right angles.
- Arc Addition Postulate: The measure of a larger arc is the sum of the measures of its component arcs.

Properties of Tangents and Secants

- A tangent to a circle is perpendicular to the radius at the point of contact.
- The Power of a Point theorem relates secants and tangents intersecting outside a circle.

Common Types of Questions and How to Approach Them

Problem-Solving Strategies

When working through Chapter 10 questions, keep these strategies in mind:

- Identify what is given and what needs to be found.
- Draw accurate diagrams to visualize the problem.
- Label all known angles, lengths, and arcs.
- Apply relevant theorems systematically.
- Check for special cases, such as semicircles or symmetrical properties.

Typical Question Types in Chapter 10

Below are some common question formats and approaches:

- **Finding angles formed by intersecting chords:** Use the theorem that states the measure of an angle formed by two intersecting chords is half the sum of the measures of the intercepted arcs.
- **Calculating arc measures:** When given an inscribed angle, find the measure of the intercepted arc, then use it for other calculations.
- **Using tangent properties:** Recognize that the angle between a tangent and a chord is equal to the inscribed angle on the intercepted arc.
- **Applying the Power of a Point theorem:** For secants and tangents intersecting outside a circle, relate the lengths to find unknown segments.

Sample Questions and Step-by-Step Answers

Question 1: Find the measure of angle ABC, inscribed in a circle, if the intercepted arc is 120° .

Answer:

- The measure of an inscribed angle is half the measure of its intercepted arc.
- Calculation: $\angle ABC = \frac{1}{2} \times 120^\circ = 60^\circ$
- Conclusion: Angle ABC measures 60° .

Question 2: Two secants intersect outside a circle. One secant has a segment of 8 units from the point of intersection to the circle and a segment of 4 units from the point to the other intersection. The second secant has segments of 6 and x units. Find x.

Answer:

- Use the Power of a Point theorem: (segment 1) $\times$ (segment 2) = (segment 1) $\times$ (segment 2) on the other secant.
- Calculation: $8 \times 4 = 6 \times x$
- $32 = 6x$
- $x = 32 / 6 \approx 5.33$ units
