- **Media Import:** Raw footage is imported into Final Cut Pro's library, utilizing optimized media whenever possible.
- **Proxy Creation:** To facilitate smoother editing, especially on mid-range hardware, proxies are generated immediately upon import. FCP allows automated proxy creation during import, with

customizable resolution and format settings.

- Organization: Folders and keywords are assigned at import, categorizing clips by scene, shot type, or other project-specific metadata.

Advantages:

- Reduced strain on hardware during editing.
- Faster timeline responsiveness.
- Simplified media management.

2. Metadata and Keyword Tagging

Studio Han emphasizes metadata tagging for quick retrieval:

- Using FCP's keyword collections, editors tag clips with descriptors such as location, talent, or scene type.
- Custom metadata fields are added for tracking technical details like camera type, lens, or frame rate.
- These practices enable rapid searches and filtering during editing sessions.

Editing Workflow: From Assembly to Refinement

Once media is organized, the actual editing process unfolds, tailored for efficiency and creative flexibility.

1. Rough Cut Assembly

- Editors assemble initial sequences using the Magnetic Timeline, which auto-aligns clips and prevents accidental overlaps.
- Using Multicam editing features, multiple camera angles are synchronized automatically, streamlining multi-camera shoots.
- The "Storyboard" feature is sometimes employed for quick assembly, especially in early conceptual stages.

2. Non-Linear, Iterative Refinement

- The studio leverages FCP's compound clips to organize complex sequences.

- Using Roles, editors categorize audio and video elements, facilitating targeted adjustments and exports.
- The Magnetic Timeline minimizes manual ripple edits, ensuring synchronized adjustments across the project.

3. Color Correction and Grading

- Final Cut Pro's integrated color tools, including Color Wheels, Curves, and Color Masks, are employed for initial correction.
- For advanced grading, FCP integrates seamlessly with DaVinci Resolve (via XML exports), or the studio uses FCP's own Color Board for secondary corrections.
- LUTs (Lookup Tables) are applied via custom effects presets for stylistic consistency across projects.

4. Audio Post-Production

- The studio utilizes FCP's built-in audio enhancements, including noise reduction, equalization, and dynamics.
- For complex audio workflows, they export segments to dedicated DAWs (e.g., Logic Pro) via XML or AAF, then re-import processed audio.
- Roles and tracks are maintained meticulously to facilitate sound design and mixing.

Advanced Features and Customization in Studio Han's Workflow

Beyond basic editing, Studio Han exploits FCP's advanced capabilities to enhance efficiency and creative output.

1. Custom Effects and Templates
