Most network fundamentals labs are practical and hands-on, designed to reinforce theoretical knowledge through simulation or real equipment. Here, we will discuss some typical lab exercises

along with detailed answers.

1. Identifying Network Topologies

In this exercise, students are asked to identify different network topologies based on physical or logical diagrams, such as star, bus, ring, mesh, or hybrid.

- **Solution:** Recognize that:
 - Star topology features a central device (switch/router) connecting all nodes.
 - Bus topology uses a single shared communication line.
 - Ring topology connects devices in a circular fashion.
 - Mesh topology provides point-to-point connections between all devices.

2. Configuring IP Addresses and Subnets

This lab involves assigning IP addresses to devices and calculating subnet masks to segment networks efficiently.

- **Sample Question:** Given the network 192.168.1.0/24, assign IP addresses to four subnets with 50 hosts each.

- **Solution Steps:**

- Determine the number of host bits needed: To support 50 hosts, need at least 6 bits ($2^6 - 2 = 62$ hosts).
- Calculate new subnet mask: /26 (255.255.255.192).
- Divide the network:
 - Subnet 1: 192.168.1.0/26 (hosts 192.168.1.1 ? 192.168.1.62)
 - Subnet 2: 192.168.1.64/26 (hosts 192.168.1.65 ? 192.168.1.126)
 - Subnet 3: 192.168.1.128/26 (hosts 192.168.1.129 ? 192.168.1.190)
 - Subnet 4: 192.168.1.192/26 (hosts 192.168.1.193 ? 192.168.1.254)

3. Configuring VLANs on Switches

Students learn to segment networks into VLANs to isolate traffic and enhance security.

- **Sample Exercise:** Create VLAN 10 with ports FastEthernet0/1 to 0/4 and assign an IP address.

- **Solution:**

- Enter global configuration mode:Switch> enable

Switch configure terminal

- Create VLAN 10:Switch(config) vlan 10

Switch(config-vlan) name SALES

- Assign ports to VLAN 10:Switch(config) interface range fa0/1 - 4

Switch(config-if-range) switchport mode access

Switch(config-if-range) switchport access vlan 10

- Assign IP address to VLAN interface:Switch(config) interface vlan 10

Switch(config-if) ip address 192.168.10.1 255.255.255.0

Switch(config-if) no shutdown

4. Static and Dynamic Routing Configuration

Routing labs focus on configuring routers to enable communication between different networks.

- **Example:** Configure static routes between two routers.

- **Solution:**

- On Router A, add a route to Network B:RouterA(config) ip route 192.168.2.0 255.255.255.0 10.0.0.2

- On Router B, add a route to Network A:RouterB(config) ip route 192.168.1.0 255.255.255.0 10.0.0.1

5. Troubleshooting Network Connectivity

This section involves diagnosing issues using tools like ping, traceroute, and show commands.

- **Scenario:** Devices cannot communicate across the network.

- Steps to Troubleshoot:

- Use ping to verify device reachability.
- Check IP configurations with ipconfig or show ip interface brief.
- Ensure VLANs and trunking are correctly configured.
