- The substrate is converted into products more rapidly

2. Data Interpretation and Graph Questions

These involve analyzing tables, graphs, or experimental data.

Marking tips:

- Correctly interpret the data before drawing conclusions
- Use data to support answers explicitly
- Avoid overgeneralization

Sample mark scheme point:

- Accurate description of trends shown in the graph (e.g., "the rate of enzyme activity increases

with temperature up to a point, then decreases")

- Referencing specific data points or values

3. Extended Responses and Explanation Questions

In these questions, students need to develop their answers with reasoning and detailed explanations.

Mark scheme guidance:

- Award marks for each valid point made
- Full marks often require multiple points, including explanations of processes and reasoning

Example:
